

The following is a list of Hillsborough County gas stations that failed accuracy tests used to determine if gas pumps are giving consumers the correct amount of gas they pay for. The Department of Agriculture's Bureau of Petroleum Inspection conducted the tests between January and October 2008.

A few items of note: Field inspectors conduct two tests on gas pumps. For the "normal" test, inspectors pump five gallons of gas at normal flow to see if the amount charged matches up with the amount pumped. In the "special" test, inspectors slow down their pumping to five gallons per minute. Also, the numbers below refer to cubic inches. If a gas station has -14 listed, that means the pump was shorting customers 14 cubic inches. If there was no negative sign, it means the gas pump was giving away 14 cubic inches. There are 231 cubic inches in a gallon. The date refers to the date tested. — **Alex Pickett**
